Important notice

This book is not medical advice. It compiles and analyses information that Dr. William Makis has published. Nothing in it recommends that anyone take ivermectin, fenbendazole or mebendazole for cancer, and it gives no doses.

Almost all of the data in this book are **patient testimonials**: messages that patients sent to Dr. Makis and that he published on his Substack. They are anecdotal reports. They were not collected in a clinical trial, there is no comparison group, and the outcomes have not been independently verified.

None of these three drugs is approved anywhere in the world as a cancer treatment. Do not stop, delay or replace cancer treatment recommended by your doctor because of anything in this book. If you are considering any of these drugs, talk to your oncologist first. Ivermectin can interact with other medicines, and high doses can cause serious side effects, including neurological effects.

The author is not affiliated with Dr. Makis and received nothing from him or from any manufacturer or seller of these drugs for this book.

1. About Dr. William Makis

William Makis is a Canadian physician who trained in diagnostic radiology and nuclear medicine. Between 2013 and 2018 he published about 45 papers in PubMed-indexed journals, mostly case reports on PET/CT imaging and radionuclide therapy (^{177}Lu-DOTATATE, ^{131}I-MIBG) for neuroendocrine tumours. His 2025 paper lists his affiliation as Alberta Health Services, Cross Cancer Institute, Edmonton.

Since 2023 he has written the Substack newsletter *Makis Health* (makisw.substack.com). From 2024 onward it has published a growing number of patient testimonials about ivermectin, fenbendazole and mebendazole, mostly in cancer. Dr. Makis states that he has helped “over 9,000 cancer patients” with these drugs and that his Substack carries “over 1,000 success stories” (686 full-length and 345 short testimonials).

This book uses only data that Dr. Makis published himself: his peer-reviewed papers on this subject and the testimonials on his Substack.

2. Peer-reviewed publications

A PubMed search for author “Makis W” (run 16 November 2026) returns one journal article by Dr. Makis that reports patient outcomes with any of these three drugs. He also co-authored one protocol paper in a journal that is not indexed in PubMed.

2.1 Fenbendazole case series (2025, retracted)

Item	Detail
Citation	Makis W, Baghli I, Martinez P. *Fenbendazole as an Anticancer Agent? A Case Series of Self-Administration in Three Patients.* Case Reports in Oncology 2025;18(1):856–863. doi:10.1159/000546362. PMID 40605964
Patients	3 patients with advanced cancer: breast, prostate, melanoma
Drug	Fenbendazole (self-administered), added to other therapies, excluding chemotherapy
Reported result	2 complete remissions, 1 near-complete remission; no adverse effects reported; remission sustained for 11 months to nearly 3 years of follow-up
Authors’ conclusion	“FBZ demonstrates potential as a novel promising therapeutic option for repurposing in oncology… warrants further clinical research.”
Status	**Retracted** by the publisher and editor (Case Rep Oncol 2026;19(1):169, 21 January 2026). Dr. Makis says the retraction was based on an alleged undeclared conflict of interest, which he disputes.

> Note: this paper is about fenbendazole only, not ivermectin. Because the patients also used other therapies, the paper cannot show which treatment produced the remissions.

2.2 “Hybrid orthomolecular protocol” (2024)

In September 2024 Dr. Makis co-authored, with Ilyes Baghli, Paul Marik and others, a paper in the *Journal of Orthomolecular Medicine*, reported under the title *Mitochondrial-Stem Cell Connection in Cancer Treatment: A Hybrid Orthomolecular Protocol*. It proposes a treatment protocol that includes ivermectin, mebendazole and fenbendazole. It is a protocol and literature review and **contains no new patient outcome data**. The fact-checking organisation Science Feedback reviewed it and concluded that it relies on preclinical studies and anecdotal reports rather than clinical trials.

2.3 Summary

As of November 2026, Dr. Makis has no peer-reviewed clinical study of ivermectin in cancer. His only peer-reviewed outcome data on these drugs (3 patients, fenbendazole) has been retracted. Everything else in this book comes from his Substack testimonials.

3. The testimonial dataset

3.1 How the data were collected

I downloaded the yearly post archives (sitemaps) of *Makis Health* for 2023–2026 (2,910 posts in total) and kept every post with "Testimonial" in the title: **859 posts**, published in 2024–2026. Each post title follows a fairly fixed pattern, for example:

> *"IVERMECTIN and FENBENDAZOLE Testimonial – 60 year old USA man diagnosed with Stage 4 Prostate Cancer Gleason 9 and bone metastases. PSA dropped from 141 to 0.25 in 3 months!"*

From each title I extracted the drugs, age, sex, location, cancer type, stage, time on treatment and the outcome *as stated in the title*. Outcomes were sorted into five groups by keywords:

- **Cancer-free / remission**: the title says cancer-free, no evidence of disease (NED), remission, "disappeared" and similar.
- **Improvement / shrinkage**: the title reports a smaller tumour, falling tumour markers or other improvement.
- **Stable**: the title says stable or no progression.
- **Died**: the title reports a death.
- **Not stated**: the title gives no outcome (often "reports after 6 months").

The analysis uses titles only. The full posts often contain scans, blood tests and the patient's own words, and some are behind a paywall. A post's content may say more, or less, than its title. Some posts bundle several short testimonials under one title and are counted once.

3.2 Size of the dataset

	Posts
Testimonial posts, total	859
… about cancer	806 (94%)
… about other conditions (dementia, Lyme disease, psoriasis, arthritis, etc.)	53 (6%)

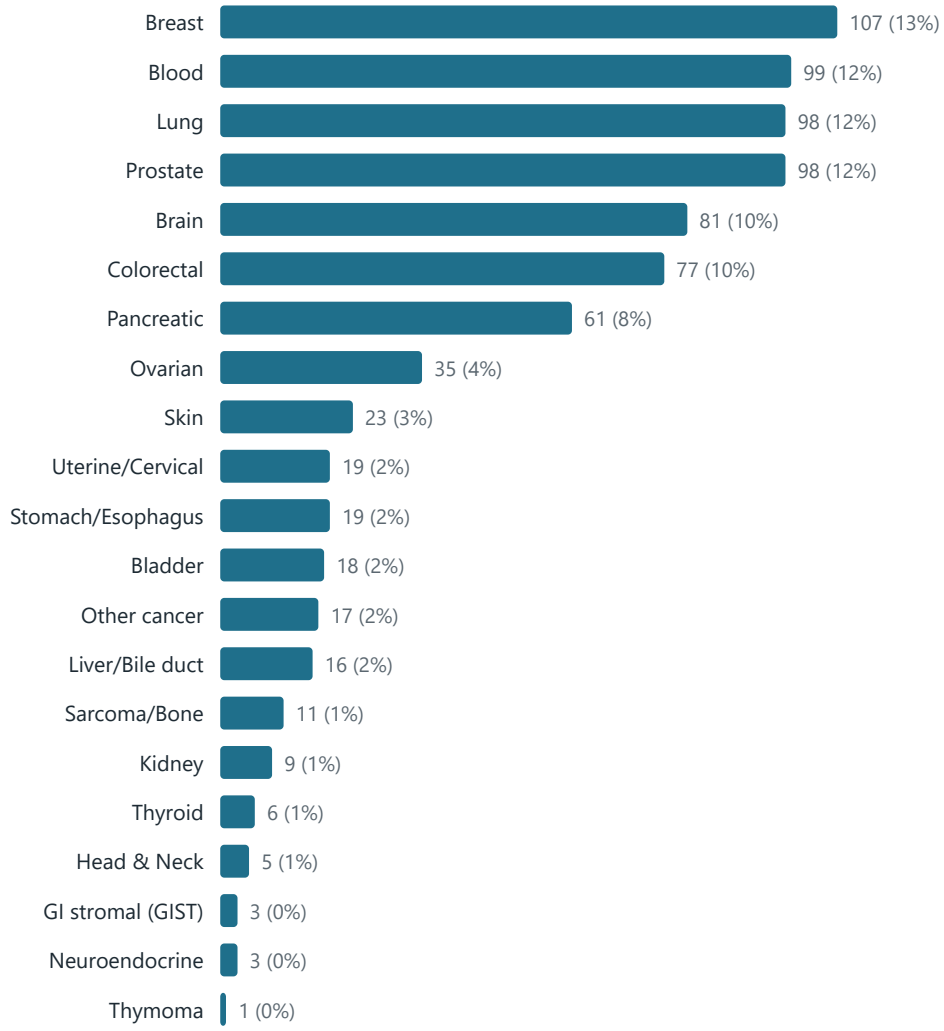

Testimonial posts by year of publication.

The rest of this book analyses the **806 cancer testimonials**.

4. Who the patients were

4.1 Cancer types

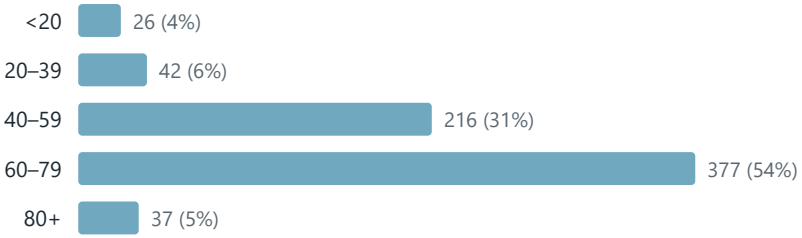

Cancer testimonials by cancer type (n=806). "Blood" includes leukaemia, lymphoma, myeloma and myeloproliferative neoplasms.

4.2 Stage

438 of 806 (54%) titles say the patient had **stage 4** (metastatic) cancer. Stage 3 appears in 39, stage 2 in 17 and stage 1 in 4. The remaining 308 titles give no stage.

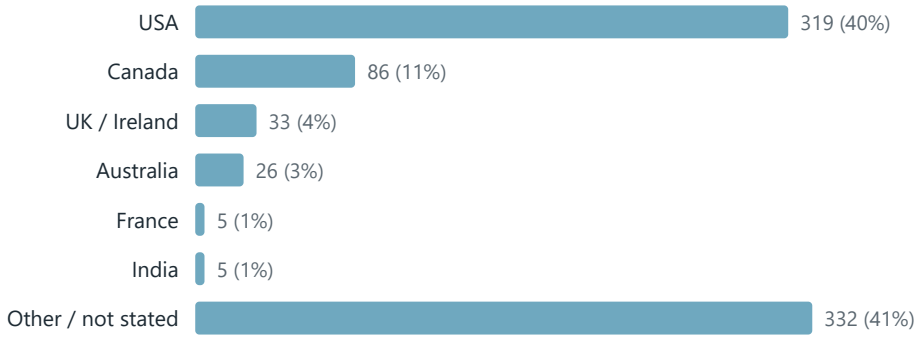

4.3 Age and sex

Age is given in 698 titles: median **63 years** (range 1–94). Sex: 343 male, 334 female, 129 not stated.

Age at the time of the testimonial (n=698).

4.4 Country

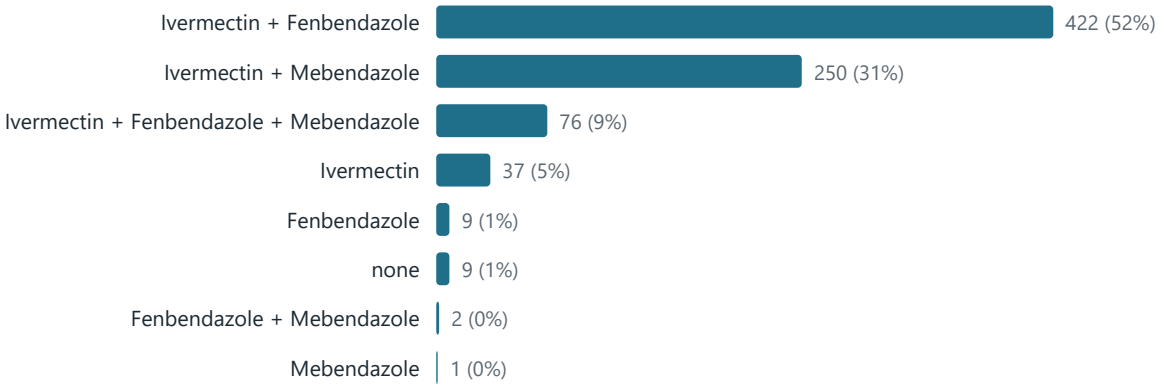

Patient location as given in the title. US states are counted as USA; Canadian provinces as Canada.

5. Drugs and time on treatment

5.1 Drug combinations

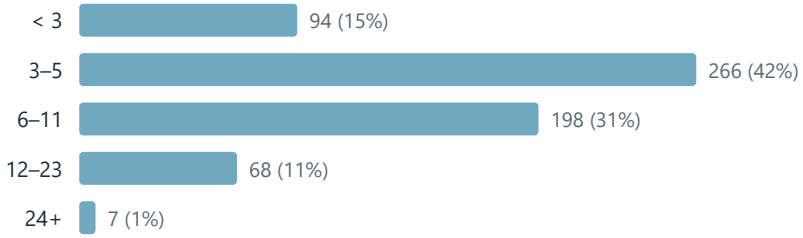

Ivermectin is named in 785 titles (97%), fenbendazole in 509 (63%) and mebendazole in 329 (41%). Most patients used two or three drugs together.

Drug combination named in the title. Many posts mention additional supplements (e.g. DMSO, CBD oil, curcumin, vitamin D) and conventional treatment in the body text; these are not counted here.

5.2 Time on treatment when reported

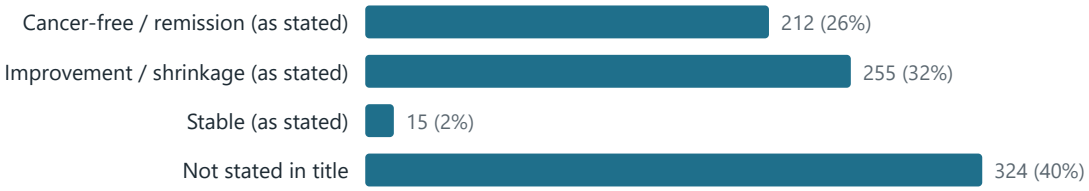

633 titles state how long the patient had been taking the drugs at the time of the report. The median is **5 months**.

Months on treatment at the time of the testimonial (n=633). This is follow-up time, not survival time.

6. Reported outcomes

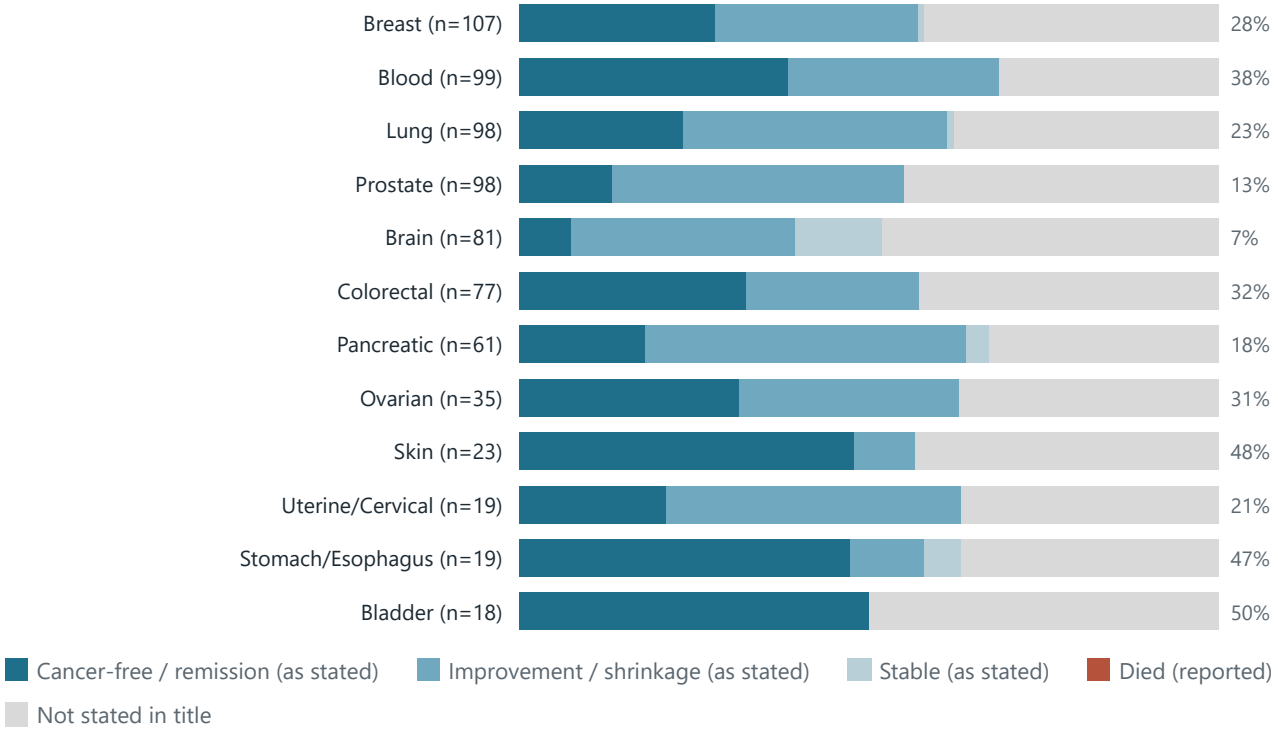

6.1 All cancer testimonials

Outcome as stated in the post title (n=806).

In 212 titles (26%) the patient is described as cancer-free or in remission. Another 255 (32%) report shrinkage or other improvement. 324 (40%) give no outcome in the title. Of the stage 4 patients, 111 of 438 (25%) are described as cancer-free or in remission.

6.2 Outcomes by cancer type

Outcome as stated, by cancer type (12 most common). The figure at the right is the share described as cancer-free or in remission.

6.3 Deaths

No title in the dataset report a death: by design, the collection contains almost no failures. Dr. Makis has given his own estimate in a separate context: of about 146 cancer patients he followed, roughly 30 became cancer-free, about 25–30 died and about 100 were still being treated or followed (reported in a third-party summary of his work; the original statement could not be located). Neither figure can be checked, but it shows that the testimonials are a selection of good results, not a complete record.

7. How to read these numbers

These figures describe what was *published*, not what happens to cancer patients who take these drugs. Several features of the data mean they cannot answer whether the drugs work:

1. **Selection.** Patients choose to write in, and Dr. Makis chooses what to publish. People with bad outcomes, and patients who died, rarely send testimonials. Dr. Makis says he has helped over 9,000 patients; 806 cancer testimonials would be about 9% of them.
2. **No comparison group.** Without a matched group of patients who did not take the drugs, it is impossible to know how many would have done equally well anyway.
3. **Other treatments.** Many patients were also receiving surgery, chemotherapy, radiotherapy, hormone therapy or immunotherapy. Improvement in a scan or tumour marker during combined treatment cannot be attributed to one component.
4. **Self-report and no verification.** Scans and lab results are reported by the patient or family and summarised by Dr. Makis. No independent reviewer checked diagnoses, staging or responses using standard criteria (such as RECIST).
5. **Short follow-up.** The median report comes about 5 months after starting. “Cancer-free” at a few months is not the same as long-term cure, and later updates are not systematically published.
6. **Title-based classification.** This analysis reads post titles. It may misclassify some posts and it does not capture details given only in the body.

These limits do not mean the reports are false. They mean the testimonials are **hypothesis-generating**: they can suggest what is worth testing in a proper clinical trial, but they cannot show that ivermectin, fenbendazole or mebendazole treat cancer.

8. Conclusion

Dr. Makis has published 859 testimonials between 2024 and 2026, 806 of them about cancer. Most involve advanced (stage 4) cancer and combinations of ivermectin with fenbendazole or mebendazole. As stated in the titles, 26% describe remission and another 32% describe improvement.

His only peer-reviewed outcome data on these drugs, a three-patient fenbendazole case series, was retracted in January 2026. No controlled clinical trial of ivermectin, fenbendazole or mebendazole in cancer has been published by Dr. Makis. The testimonials are a large and detailed collection of anecdotes, and the decisive test, a randomised controlled trial, has not yet been done.

Appendix A — Index of cancer testimonials

All 806 cancer testimonial posts, grouped by cancer type. Titles are reproduced exactly as published (in English). The outcome tag is this book's classification of the title. Each title links to the original post.

Breast (107)

#	Year	Outcome	Title (original)
1	2024	Remission	IVERMECTIN Testimonial in Breast Cancer - after 4 months of high dose Ivermectin, patient is cancer free. Now what?
2	2024	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 70s year old Breast Cancer patient now "Cancer Free" after ignoring Radiation Oncologist advice to STOP Ivermectin during Radiation Therapy!
3	2024	—	IVERMECTIN and MEBENDAZOLE Testimonial - 69 year old USA Stage 4 Breast Cancer patient with metastases to liver and bones on Enhertu
4	2024	—	IVERMECTIN and MEBENDAZOLE Testimonial - my 36 year old European patient clears aggressive 3.5cm breast lesion in 3 months!
5	2025	—	IVERMECTIN Testimonial - 80 year old woman post breast cancer lumpectomy was on maintenance Ivermectin - unexpectedly, she defeated Rheumatoid Arthritis and Crohn's Disease complications
6	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 42 year old Canadian woman with Stage 4 Breast Cancer metastatic to bones reports after 6 months
7	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 46 year old patient Stage 4 Breast Cancer metastatic to bone not responding to mainstream or Integrative therapy, sees massive drop in cancer blood markers
8	2025	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 49 year old Australian woman with Stage 4 Breast Cancer is cancer free after 6 weeks!
9	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 49 year old Australian woman with Stage 4 Breast Cancer to liver and bones who failed Kisqali, has full metabolic response on PET after only 6 weeks!
10	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 53 year old UK woman with Stage 4 Breast Cancer tumor of 12cm, has incredible response after 2 months!
11	2025	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 53 year old UTAH woman with Stage 4 Breast Cancer gets to remission in 11 months!!
12	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 54 year old Illinois woman with Stage 4 Breast Cancer to bones has excellent response!
13	2025	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 57 year old California woman with Stage 4 Breast Cancer goes from progressing metastases to "CANCER FREE" in 3 months!
14	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 65 year old MN, USA patient with Stage 3 Breast Cancer, 5cm tumor and lymph nodes reports after 7 months
15	2025	Improved	IVERMECTIN and FENBENDAZOLE Testimonial - 66 year old Stage 2 Breast Cancer patient (nurse) shrinks her tumor by more than half in 2 months before mastectomy (no chemo)!
16	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - 67 Year old Wisconsin woman with Stage 4 Breast Cancer metastatic to lymph nodes and bones (recurrence after J&J COVID-19 Vaccine) reports after 5 months
17	2025	—	IVERMECTIN and FENBENDAZOLE Testimonial - Virginia woman with 8cm Breast Cancer, poorly differentiated, has no chemo side effects!
18	2025	Remission	IVERMECTIN and FENBENDAZOLE and METHYLENE BLUE Testimonial - Stage 4 Breast Cancer patient with bone metastases has a dramatic response, breast tumor shrinks, lymph node and lung metastases disappear!
19	2025	Improved	IVERMECTIN and MEBEDAZOLE Testimonial - 61 year old Florida woman with Stage 4 Breast Cancer metastatic to lungs, liver, and bones, has dramatic response in 2 months - 83% tumor shrinkage!
20	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 34 year old Arizona woman with Stage 3 Breast Cancer has 80% tumor shrinkage of primary and 100% resolution of axillary nodes after 3.5 months!
21	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 35 year old American woman with Stage 4 Breast cancer metastatic to lymph nodes and bones sees dramatic improvement!
22	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 37 year old woman in JORDAN with Stage 4 Breast Cancer and nodal and bone metastases reports after 3 months - shrinking tumors
23	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 42 year old Cambridge, UK woman with Stage 1 Breast Cancer Triple Negative - after 4 months, she has no cancer on pathology after surgery!

#	Year	Outcome	Title (original)
24	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 45 year old California woman with Stage 4 Breast Cancer reports after 2 months - also uses Castor Oil and DMSO to shrink tumors!!
25	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 46 year old GA woman with Stage 4 Triple Negative Breast Cancer recurrence to liver & ascites, has dramatic improvement after only 2.5 months!
26	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 46 year old Stage 4 Breast Cancer patient clears bone metastases in 3 months!! Confirmed on PET/CT!
27	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 46 year old Texas woman with Early Breast Cancer - Tumor shrinks 5.2cm to 1.8cm in 4 months! No CHEMO
28	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 46 year old Texas woman with Stage 2 Breast Cancer ER/PR Positive reports after 7 months
29	2025	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 47 year old UK woman with Stage 4 Invasive Lobular Breast Cancer metastatic to lymph nodes, bones (and pituitary gland) becomes cancer free after 4 months!
30	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 47 year old woman with Breast Cancer sees 95% tumor volume reduction after 4 months!
31	2025	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 48 year old California woman with Stage 3 Metaplastic Triple Negative Breast Cancer reports after 2 months - remission achieved
32	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 48 year old Pennsylvania woman with Stage 4 Breast Cancer has miraculous result after 3 months - tumor shrinks 99.2%
33	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 50 year old Nebraska woman with Stage 4 Breast Cancer TNBC to bones reports after 6 months
34	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 51 year old American Woman shrinks her Breast cancer 99% prior to surgery!! Breast surgeon hasn't seen this in 30 years of practice!
35	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 52 year old New Zealand Woman with Stage 4 Breast Cancer metastatic to liver, lung and bones fails conventional therapy but gets a 2nd chance!
36	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 53 year old Canadian woman with Stage 2 Breast Cancer TNBC with 7.8cm tumor, has no cancer on surgical pathology 7 months later (photos) !!!
37	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 61 year old NY woman with Stage 2 Triple Negative Breast Cancer sees tumor shrinkage from 4.0 to 1.2cm in only 3 months!
38	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 63 year Canadian woman with Stage 3 Breast Cancer after 4 months: 91% reduction of breast mass, 100% elimination of large axillary lymph nodes up to 3.6cm
39	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 66 year old North Carolina woman with Stage 4 Breast Cancer metastatic to bones reports after 1 month (tumor shrinkage by over 50%)
40	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 67 year old Ontario patient with Stage 4 Breast Cancer metastatic to lungs and bones has a stunning turnaround after only 2 months! Up to 99.7% tumor shrinkage
41	2025	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 67 yo Canadian woman with Stage 4 Breast cancer metastatic to bones and lungs sees dramatic improvement in quality of life
42	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 69 year old woman with Stage 4 Breast Cancer metastatic to liver & progressing - Amazing response on CEA and CA27-29 after 2 months!
43	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - 75 year old Oklahoma woman with Stage 1 Breast Cancer (TNBC Metaplastic) reports after 4 months - no cancer!
44	2025	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 75 year old patient with Breast cancer 10 years ago, has 5 new breast masses. They almost completely disappear after 4 months on protocol!
45	2025	—	IVERMECTIN and MEBENDAZOLE Testimonial - From the Brink - 35 year old Stage 4 Breast Turbo Cancer patient with "little time left to live" to "no active disease" - the miracle PET/CT scan at 6 months!
46	2025	—	IVERMECTIN and MEBENDZOLE Testimonial - 67 year old California woman with Stage 4 Breast Cancer to bones and liver reports after 9 months
47	2025	—	IVERMECTIN, FENBENDAZOLE Testimonial - 62 year old Florida woman with multiple Breast Cancer masses shares a Thanksgiving message of gratitude
48	2025	—	IVERMECTIN, FENBENDAZOLE and MEBENDAZOLE Testimonial - 63 year old California woman with Stage 1 Breast Cancer 1cm tumor has surgery after 4 months - No Cancer found!!
49	2025	—	IVERMECTIN, FENBENDAZOLE and MEBENDAZOLE Testimonial - 66 year old California Woman with Stage 4 Breast Cancer metastatic everywhere reports after 6 months
50	2025	Remission	IVERMECTIN, FENBENDAZOLE and MEBENDAZOLE Testimonial - 80 year old retired nurse with Stage 4 Triple Negative Breast Cancer with lung metastases and axillary nodes gets to "Cancer Free" after 1 year.

#	Year	Outcome	Title (original)
51	2025	—	IVERMECTIN, FENBENDAZOLE and MEBENDAZOLE Testimonial: 52 year old Louisiana woman with Stage 4 Breast Cancer (after 2 Pfizer jabs) reports almost complete resolution of metastases after 2.5 months!
52	2025	Improved	IVERMECTIN, FENBENDAZOLE, MEBENDAZOLE and DMSO Testimonial - 49 year old woman in Puerto Rico with Stage 3 Breast Cancer has >50% tumor shrinkage in 4 weeks! Oncologist left speechless...
53	2025	—	IVERMECTIN, MEBENDAZOLE Testimonial - 75 year old Tennessee woman with Stage 4 Breast Cancer extensive metastases to nodes and bones reports after 3 months
54	2025	Remission	TOPICAL IVERMECTIN Testimonial - 77 year old Ontario Nurse with a new breast mass, which disappears by the time she is to get a biopsy
55	2026	—	IVERMECTIN and ALBENDAZOLE Testimonial - 53 year old SERBIAN Woman with Stage 4 Breast Cancer TNBC, reports after 8 months with something unprecedented - her tumor pathology has changed!
56	2026	Improved	IVERMECTIN and FENBENDAZOLE Testimonial (Topical Castor Oil and Fenbendazole Cream) - 52 year old woman in ROMANIA with Stage 4 Breast Cancer reports after 3 months...Cancer markers improving!
57	2026	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 40 year old Australian Police Officer with Stage 3 Breast Cancer TNBC reports after 10 months - Cancer Free!!
58	2026	Improved	IVERMECTIN and FENBENDAZOLE Testimonial - 58 year old woman in NETHERLANDS with Stage 4 Breast Cancer reports after 7 months: 95% tumor shrinkage!
59	2026	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 59 year old woman from BRAZIL with Stage 4 Breast Cancer who failed Kisqali after 12 months, reports after 2 months: Remission!!
60	2026	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 59 year old woman in BRAZIL with Stage 4 Breast Cancer reports after 3 months: from 6cm tumor to Cancer Free!
61	2026	Improved	IVERMECTIN and FENBENDAZOLE Testimonial - 62 year old woman in MOLDOVA with Breast Cancer reports after 5 months: tumor shrinks 40% and can now have surgery!
62	2026	—	IVERMECTIN and FENBENDAZOLE Testimonial - 72 year old Ohio woman with Stage 4 Breast Cancer reports after 6 months
63	2026	Remission	IVERMECTIN and FENBENDAZOLE Testimonial - 76 year old California woman with Stage 3 Breast Cancer reports after 3 months - Cancer Free!
64	2026	—	IVERMECTIN and FENBENDAZOLE Testimonial, 42 year old Canadian woman with Stage 4 Breast Cancer metastatic to bones reports after 8 months.
65	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 34 year old CALIFORNIA woman with Stage 3 Breast Cancer reports after 6 weeks: 4cm tumor shrinks to nothing!!
66	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 40 year old FLORIDA woman with multifocal Breast Cancer (hormone positive) reports after 2 months: 72% tumor shrinkage!!
67	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 40 year old woman in ISRAEL with Stage 4 Breast Cancer reports after 3 months - 7cm tumor shrunk until Oncologist couldn't feel it!
68	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 43 year old Canadian woman with Stage 3 Breast Cancer multifocal reports 3 months after refusing chemotherapy: tumors shrink significantly
69	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 44 year old UZBEKISTAN woman with Stage 4 Breast Cancer metastatic to lungs, liver and bones reports after 4 months: IN REMISSION!
70	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 45 year old UZBEKISTAN woman with Stage 4 Breast Cancer metastatic to bones, lungs, reports after 6 months: Cancer Free!
71	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 48 year old Pennsylvania woman with a 4.5cm Breast Cancer metastatic to axilla and lungs reports after 6 months - mastectomy shows NO TUMOR!!
72	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 48 year old TEXAS woman with Early Stage Breast Cancer reports after 12 months - No Evidence of disease but Oncologist is not happy with the result!
73	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 51 year old South Carolina woman with Stage 4 Breast Cancer reports after 3 months: tumors shrinking!
74	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 51 year old South Carolina woman with Stage 4 Breast Cancer reports after 4 months. From 2.5cm metastasis to Cancer Free!
75	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 52 year old Canadian doctors wife with Stage 4 Breast cancer and Leptomeningeal spread reports after 10 month: Improving!!
76	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 53 year old Ohio woman with Stage 4 Breast Cancer recurrence to bones reports after 4 months
77	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 53 year old woman in GEORGIA with Early Stage TNBC Breast Cancer, poorly differentiated, reports after 8 months: Cancer Free headed into Surgery!

#	Year	Outcome	Title (original)
78	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 57 year old man in England with Stage 4 Breast Cancer reports after 2 months - lung metastases shrinking!
79	2026	Stable	IVERMECTIN and MEBENDAZOLE Testimonial - 60 year old Australian woman with Stage 4 Breast Cancer reports after 6 months: Stable!
80	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 61 year old Illinois woman with Stage 4 Breast Cancer reports after 6 months - Cancer Free!
81	2026	Improved	IVERMECTIN and MEBENDAZOLE Testimonial - 61 year old Ontario, Canada woman with Stage 4 Breast Cancer reports after 3 months: tumors shrinking!
82	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 61 year old Pennsylvania woman with Breast Cancer and Paget's disease reports after 3 months
83	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 63 year old Louisiana woman with Stage 4 Breast Cancer and peritoneal metastases reports after 9 months - Cancer Free!
84	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 63 year old woman in the VIRGIN ISLANDS with Stage 4 Breast Cancer reports after 3 months: Most bone metastases healed!
85	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 64 year old Florida woman with New Breast Cancer reports after 3 months - Cancer Free
86	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 65 year old Texas woman with Stage 4 Breast Cancer fails $100k+ Kisqali Treatment at MD Anderson Cancer Center - but we turn things around in 4 months!!
87	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 67 year old California woman with Stage 4 Breast Cancer metastatic to bones reports after 11 months!
88	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 68 year old Canadian woman with breast cancer reports after 9 months: breast tumors shrank by 92% and 96%
89	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 71 year old Kansas woman with Breast Cancer recurrence in axilla was on Ivermectin for 2.5 years and added Mebendazole 8 months ago -> 90% of cancer gone
90	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 75 year old Tennessee woman with Stage 4 Breast Cancer metastatic to bone reports after 6 months: Cancer Free!
91	2026	Remission	IVERMECTIN and MEBENDAZOLE Testimonial - 76 year old CALIFORNIA woman with Stage 3 Breast Cancer reports after 3 months - Cancer Free!!
92	2026	—	IVERMECTIN and MEBENDAZOLE Testimonial - 78 year old Canadian woman with Stage 4 Breast Cancer metastatic to nodes reports after 10 months
